PROJECTS

e commerce store (next.js) | April 2026 - April 2026

- its is the next js project of the ecommerce store.

Bank managment system | May 2025 - May 2025

- Developed a robust, console-based Banking Management Application to automate core banking operations. The project focuses on efficient data management and secure transaction processing using C language.

Key Features & Responsibilities:

Account Management: Implemented logic for creating new accounts, updating customer details, and removing accounts using File Handling for persistent data storage.

Transaction Logic: Developed secure modules for Deposit and Withdrawal operations with real-time balance validation.

Data Retrieval: Built a search functionality to fetch customer details instantly using unique Account Numbers.

Security & Validation: Integrated basic input validation to ensure data integrity and prevent system crashes during invalid entries.

Resource Management: Optimized memory usage by employing efficient data structures and modular programming (Functions).
